## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-3, drawn to a method for evaluating an interferon treatment, classified in class 702, subclass 19.
- II. Claims 4-6, drawn to an array for evaluating an interferon treatment, classified in class 536, subclass 23.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, an array of Invention II may be used in different method, for example, to determine SNPs, to design drugs, to screen tissues/cells for gene expression, *etc*. Also, Invention I may use different kind of an array, *e.g.*, probes may be suspended and not immobilized on a substrate.

Because these Inventions are distinct for the reasons given above, the classification is different, and the non-patent and patent literature search required for each group is not coextensive with that requirement for another group, restriction for examination purposes as indicated is proper.

## Species Election

This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A: elect one interferon induced protein gene from among those recite, for example, in claims 2 and 5.

Species B: elect one interferon regulation factor gene from among those recite, for example, in claims 2 and 5.

Species C: elect one chemokine gene from among those recite, for example, in claims 2 and 5.

Species D: elect one interleukin gene from among those recite, for example, in claims 3 and 6.

Species E: elect one transforming growth factor gene from among those recite, for example, in claims 3 and 6.

Species of group A, interferon induced protein genes are distinct because they have different structure and function, and data generated for reach gene is expected to be different from the data generated for any other gene.

Species of group B, interferon regulation factor genes are distinct because they have different structure and function, and data generated for reach gene is expected to be different from the data generated for any other gene.

Species of group C, chemokine genes are distinct because they have different structure and function, and data generated for reach gene is expected to be different from the data generated for any other gene.

Species of group D, interleukin genes are distinct because they have different structure and function, and data generated for reach gene is expected to be different from the data generated for any other gene.

Species of group E, transforming growth factor genes are distinct because they have different structure and function, and data generated for reach gene is expected to be different from the data generated for any other gene.

Applicant is required under 35 U.S.C. 121 to elect ONE gene from EACH disclosed species A-E for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 4 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1631

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marina Miller whose telephone number is (571)272-6101. The examiner can normally be reached on 8-5, M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ardin Marschel, Ph. D. can be reached on (571)272-0718. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
